## DETAILED ACTION

### *Election/Restrictions*

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1, drawn to method of detecting the presence of malignant cancer as it relates to comparing a nucleic acid, classified in class 435, subclass 6.
  - II. Claim 1, drawn to method of detecting the presence of malignant cancer as it relates to comparing a protein, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group I and II are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of group I comprise steps which are not required for or present in the method of group II: comparing KAI1 mRNA sequence to wild type sequence (group I) and comparing KAI1 protein sequence to wild-type protein (group II). The end results of the methods are different: detecting a nucleic acid (group I) and detecting a protein (group II). Additionally, the inventions of groups I and II are patentably distinct because they use different products having different structures and functions. The nucleic acid of group I is composed of deoxyribonucleotides linked by phosphodiester bonds and assumes the form of a double helix. The polypeptide of group II is composed of amino acids linked by peptide bonds and can assume complex tertiary structures. Thus, the operation, function, and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different groups are patentably distinct. Furthermore, searching the inventions of group I and II would impose a serious burden because the search for

a comparing nucleic acid sequence is not coextensive with a search for comparing a protein sequence.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
